

To start the game, go to the game page and click the start button. At any time click the stop button and you will receive a random score between 10 and 75 in the box marked "score". Then you must subtract the score you have received from the running score which you will find in the box marked "running score" and which starts at 301. Type the result of your subtraction in the box marked "subtract", and then click the "go" button. The box marked "answer" will tell you if you have subtracted correctly. If you have subtracted correctly Star Darts will change your "running score" to the result of your subtraction. If you have subtracted incorrectly Star Darts will change your "running score" to your old running score plus the random number that you had received. Your score will never go over 301. Next go to the first step at the top of the instructions and repeat until your "running score" reaches 0 or a negative number. At the end you must answer the result of the subtraction if it is 0 or a negative number. Star Darts will tell you when you have won the game.
